**FERTIGSTELLUNG**  
**2001**

**SAMMLUNG**  
**Architekturzentrum Wien**

**PUBLIKATIONSDATUM**  
**19. November 2001**

A modern standard of construction and engineering, enhanced by a double façade, helps in reducing heating and air conditioning costs. The new central power station was raised to the level of the existing cooling towers. The space beneath was converted into an open top floor with a winter garden situated at the front, offering a panoramic view of the city.

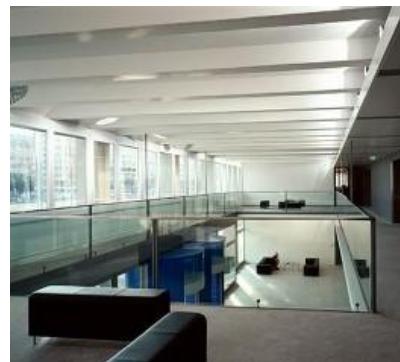

The smooth outer hull of the double façade is slightly convex and aligns with the curve of the river and the cityscape beyond. This convex glass membrane softens the structure's heaviness and gives it an inner tension, as though it were under pressure. The IBM building was transformed into an easily recognizable Vienna landmark.

The digital equipment of the façade – information modules with monitors and electronic writing displays arranged between the two glass walls – creates a communication interface with the public space. When the sun screens are closed, projections from the opposite riverbank can turn the opaque glass façade into a single large screen. A façade wall in the city is thus transformed into an urban home page; the building as a complex „mechanism“ seeks to establish a strong nexus with IBM.

An art project by the group „Granular Synthesis,“ called „Transformation of Building Illumination,“ creates the effect of a building radiating from within. Computer controlled lighting of the neon lamps in all offices, in each floor of the building, composes an undulating animation of light on all sides of the façade. In addition, the front of the façade can be perceived as a matrix for text and graphics by manipulation of the 180 sunscreens (= 180 pixels).

**IBM redesign DIANA****DATENBLATT**

Architektur: Rudolf Prohazka  
 Mitarbeit Architektur: Ernst Tschabuschnig, Herwig Biack, Nikolaus Westhausser,  
 Sebastian Schöler  
 Bauherrschaft: IBM Österreich  
 Tragwerksplanung: Vasko + Partner Ingenieure, Kurt Hoff  
 Fotografie: Margherita Spiluttini

Bauphysik: Walter Prause, Wien  
 Haustechnik-Planung: Pickl & Partner, Graz  
 Licht-Planung: Konzept Licht, Wien  
 Kunst am Bau: Granular Synthesis

Maßnahme: Umbau  
 Funktion: Büro und Verwaltung

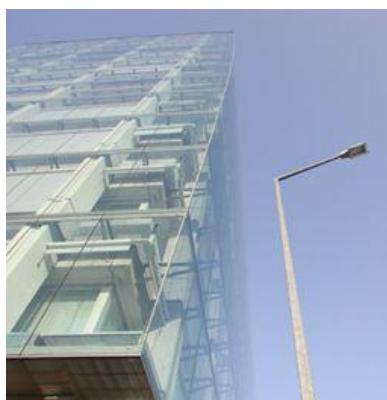

Planung: 1999  
 Ausführung: 2000 - 2001

**PUBLIKATIONEN**

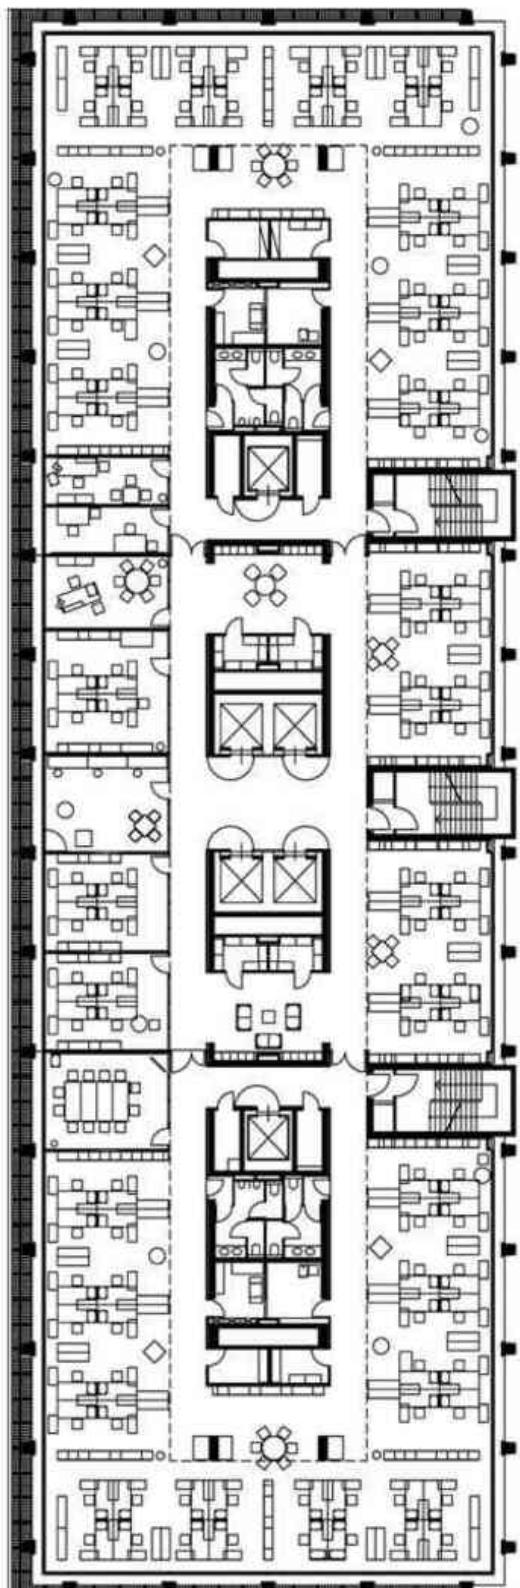

werk, bauen + wohnen, Forschung im Büro, Verlag Werk AG, Zürich 2002.

**WEITERE TEXTE**

Alpenschauen am Kanal, Jan Tabor, Falter, Mittwoch, 21. August 2002
