

© Márton Dévényi

The building is part of the 2010 European Cultural Capital project in Pécs, together with the renewal of the whole Tettye district and a public park. The project included the renovation of the last remaining wine press house of the area, and an extension housing new facilities to display the local winemaking traditions. Terraces divide the huge slope of the plot, supported by local stone retaining walls. The new building is hidden underground in the topmost wall. The upper terrace is sheltered by a steel canopy covered by creeper grape. (architects' text)
