This project, begun in 2003 and completed in 2006, is located on the site of an old coal mine, near a carbon factory in a suburban area. Designed as a cube, approximately 115 feet to a side, it is a contrast to the large industrial buildings as well as the smaller scale residences around it. Divided into four floors of varying heights, windows of varying dimensions provide natural light and views of the surrounding areas. The first floor is a common study area completely open with no partitions. (Media Kit announcing the 2010 Pritzker architecture Prize Laureate)
